Unvalidated Redirects and Forwards

Objectives:

- Unvalidated Redirect

    - Used in phishing attacks to direct victim to malicious site

        - Malicious site = clone of valid site

            - User then 'logs in'

                - Creds are harvested by attacker

                    - Victim is forwarded to legit site

- Unvalidated Forward

    - Attacker can access restricted pages
