
# DOCKER

*Docker Internal Container Processing*

## *When we run container: Internal Processing*

- Looks for the image in Image Cache
- Then looks in remote docker repository (default hub.docker.com )
- Download the latest version of image
- Create new container based on the image
- Gives it a virtual IP on private network inside docker engine
- Open port 80 on host machine and route to port 80 inside container
- Starts container by using CMD in imager docker file

## *Will see you in Next Lecture…*
