

# Subfinder Subdomain Resolver

The screenshot shows the GitHub repository page for `projectdiscovery/subfinder`. The repository is in the `master` branch, has 2 branches, and 28 tags. It features a merge pull request #343 from `Oxflotus/patch-1` by `bauthard`, merged 10 days ago with commit `d85ee13`. The repository has 799 commits. The file list includes `.github` (Fixed CI, 24 days ago), `static` (include images, 11 months ago), and `v2` (Fixed CI issues, 24 days ago). The `About` section describes Subfinder as a subdomain discovery tool for websites, designed as a passive framework for bug bounties and safe for penetration testing. A link to `projectdiscovery.io/open-source` is provided.
