

TASKS TO COMPLETE

Windows Software To-do list #8

- Connect to the Attacker server in every five seconds:
 - Use HTTP Get request, Sleep() function of Thread class.

Send GET requests to the attacker server in every 5 seconds using WebClient class.

Steps to do

1. Open-up your attacker server and learn ip address of it using **ip a** command.
2. Start the apache2 service on the attacker server using **sudo service apache2 start** command.
3. Create a url variable for storing the url which will be used for retrieving commands.
4. Create an infinite while loop and send GET request to the url in every 5 seconds.
5. Store the results of GET request as command and send it to **CommandParser** function.

If you are new to this concept learn more about HTTP REQUESTS and Thread class before keeping continue.
