TASKS TO COMPLETE

Web Panel To-do list #10

- Create victim managing pages.

  - Create 2 pages; **manage.php** and **showresults.php.**

  - Inside the manage.php, create a form for inserting a command to database and create a textbox for showing the result of command.

  - Manage.php will send get requests to showresults.php in every 2 seconds in order to retrieve results from database.

  - Use **forms** and **textarea** tag of HTML to create visual objects. And use **xmlHttpRequest** class and **setTimeout** function of javascript in order to send GET request in 2 seconds interval.

If you are new to these concepts, learn more about specified keywords before keeping continue.
