

- 1) Download and Install the node.js from <https://nodejs.org/en/download/> as per your operating system and check if the installation is successful using the command 'node -v' which will print the current installed version.
- 2) Run the command 'npm install -g @angular/cli' to install Angular CLI.
- 3) Download the visual code using the link <https://code.visualstudio.com/> and import the angular project provided.
- 4) Navigate to the folder inside the project where package.json is present and run the command 'npm install' by opening a terminal. This will install all the dependencies inside the new folder created with the name 'node\_modules'
- 5) Run the command 'ng serve' and it will start the application at 'http://localhost:4200/' by default.
