Introduction

Hello and welcome to the Spreading Guide, written by ViRuzz™, the administrator of HackRules.com. In This Guide you will learn how to spread your "server" or "bot" successfully and fast. All is very simple and well explained. You will get many downloads every day! Just do not be lazy, follow all steps! Enough talking, lets get to it.

The Spreading

Here I listed some great Spreading ways. They work perfectly and gave me more then 1000 downloads.

- Youtube, MyVideo, Clipfish (Make a Video of a Fake program, and say it real Works. Simply bind your Server/Bot/Virus to the fake, Upload it on a hosting (example: www.mediafire.com) get the downloadlink and Paste it in the describtion of the Video. If you are Lucky, and the program seems legit, they will download and run it.

- Torrents (Make a torrent in BitTorrent or utorrent, Register at thepiratebay.org, and Upload it. Make sure the Server/Bot/Virus has a nice describtion, and it should Look legit. If you have Done all right, you will get a Ton of victims.

- Forums This is a nice spreading method. If your Server is FUD (Fully un-detectable), you will get many Victims. Of course you have to make some Pictures, or give some more details about the program you make a Thread about. (In this Situation its the Server.) just Say it is a cool Call of Duty 4 Modern Warfare 2 Keygen or something like that.)

- Java Driveby Site (This is a free site you can make. The Victim just needs to go to the Site, and He is infected without Even Downloading something.)

- Online Chat Rooms (This is a very powerful spreading method. Crypt your Server, name it "Sexy slideshow" and in the online Chat Room say its a slideshow and if you are Lucky they will download and you will get victims.)

- Facebook, MySpace etc (Say you have uploaded very nice pics of you and give them the Downloadlink.)

- Some programs which can Spread your Server automatically.

Another great method to spread your server fast:

1. You have to signup here: www.easyhits4u.com
2. Now you need a direct link to your Virus (example: localhostr.com) or JAVA Driveby.

Now you should get Victims…

How?

Its really simple. You need to go to "My Sites", and press on the Left "Add new site". Here you will choose to have them see the site for the LOWWEST amount of time. Then you need to add the link to your .exe or JAVA Driveby.

Now you need to go to the Start link on the right. You watch for longer, but you get more credits.

After you surf your desired amount you can then give the credits to your site.

Now just wait for Victims. Just make sure, your JAVA Driveby or your .exe is FULLY FUD or 1/20 UD.

The End.

After following this steps, you will get a ton of victims. Just do not be lazy, and do all what was written in this Guide. Enjoy your spreading and your future Victims :)
